Emphasis in Technology Management
 15 - 33 Credits

120-CREDIT BACHELOR OF APPLIED SCIENCE IN PROJECT MANAGEMENT

Bachelor's Degree Project Management

Northwest Florida State College offers a **Bachelor of Applied Science degree in Project Management (BAS)** which provides students a unique opportunity to gain the skills and knowledge necessary for career advancement in a variety of areas.

There are six pre-planned areas of emphasis in the BAS program and an option for developing a "customized" program plan that allows a student, in consultation with an advisor, to select the set of upper division courses most complementary to his or her education and career goals. Areas of specialization include:

- Project Management
- Quality Improvement
- Customized Track
- Training & Development/Human Resources
- Acquisitions
- Public Service Management
- Technology Management

The bachelor's degree program provides a career-ladder for students who have already completed an associate degree and who wish to continue their education at the bachelor's level or, beginning students may design a program of study for the degree as early as the freshman year if they have not yet obtained an associate degree. The program is an especially desirable educational option for graduates of the Community College of the Air Force and for individuals transitioning from active duty military to the civilian workplace.

Recent graduates are employed as project managers, human resources and financial managers, contract managers, and technical analysts in settings that range from manufacturing, real estate, hospitality and tourism to state and county government, defense contractors, civil service and the military. Other graduates are pursuing education at the master's degree level.

Coursework for the bachelor's degree program is designed with the working student in mind and is offered in a flexible, non-traditional format. A substantial number of courses in the degree program are offered as distance learning, or "blended" classes (part traditional classroom and part nontraditional format). Classes are available evenings, weekends and in concentrated "fast-track terms". Coursework incorporates internships, seminars, and other work-based learning activities designed to ensure students acquire the latest skills and content. Students receive the full range of articulation and transfer rights guaranteed by Florida law through common course numbering and the statewide articulation agreement.

In addition to the 36-credit general education requirement (1000 and 2000 level courses) for a baccalaureate degree, students will build upon their associate degree coursework to complete a comprehensive 120-credit curriculum. The junior and senior level curriculum (3000 and 4000 level courses) consists of a 27-credit core and a 15-credit area of emphasis.

An Equal Access/Equal Opportunity Institution

"As evidenced by the strong show of commitment by local community and business leaders, the college has done an outstanding job in developing a high-demand bachelor's degree program . . . the college also provides a very cost effective way for students to earn their bachelor's degree . . ."

**- Jim Horne
Former Florida Commissioner of Education**

"Our growing staff requires that we promote technical folks to management roles . . . learning these skills requires training in the areas that will come from the bachelor's program at NWFSC."

**- Brian Pennington,
Senior Vice President
TYBRIN Corporation**

"The curriculum includes not only generic management courses but also critical instruction in the specific disciplines needed by defense industry contractors."

**- John Marshall, Program Manager
Aerospace Integration Corporation**
