

# Welcome

Dr. J. Jean Mitchell

I am a Professor of Anatomy and Physiology in the science department.

My Doctorate of Neuroscience is from the University of Florida's College of Medicine.

My B.S. is in Zoology, also from the University of Florida (Go Gators!).

My neuroscientific research interests include the effects of aging on central nervous system function (Alzheimer Disease), the effects of alcohol on nervous system development (Fetal Alcohol Syndrome) as well as studying the complex processes associated with learning and memory.

Prior to teaching at NWFSC, I was a neuroscience researcher and neuroanatomy instructor at the University of Florida's McKnight Brain Institute, College of Medicine, and College of Veterinary Medicine Physiological Sciences Department.

"My own resident green tree frog (*Hyla cinerea*) welcomes you to my website!"

"Science does not know its debt to imagination."

~Ralph Waldo Emerson
